

## Horsechestnut Disease

Informational table showing disease name, symptoms, pathogen/cause, and management of Horsechestnut diseases.

 ARTICLES | UPDATED: JULY 31, 2016

Disease	Symptoms	Pathogen/Cause	Management
Leaf Blotch	Small irregular, reddish-brown spots and large blotches with yellow halos form in late June or early July. Most infected leaves brown and fall prematurely. Tiny, black fruiting structures are found in the dead areas.	<i>Guignardia aesculi</i>	For trees of high value, apply a fungicide in early summer.
